JUnit · NUnit · PyUnit · Jest · Agile · GIT

PROJECTS

BTC Investment Website

05/2023 - 08/2023 Lagos, Nigeria

Developed a comprehensive BTC investment website that provides users with real-time market data, investment options, and secure transaction capabilities.

- The user-friendly interface and easy navigation led to higher user retention and engagement on the platform.
- Implemented robust security measures that enhanced user trust, resulting in a significant increase in transaction volume.
- Provided flexibility to configure rule using centralised NodeJS based GUI

2022 - 2024

Dijix Solutions Ltd.

Lagos, Nigeria

Dijix Solutions Ltd is an innovative crypto platform that provides secure and user-friendly solutions for digital asset trading and management, empowering users to navigate the cryptocurrency landscape with confidence.

- **Web Development** : Design and develop responsive web applications using HTML, Tailwind, and ASP.NET, ensuring optimal user experiences across various devices.
- **Backend Integration** : Utilize C# and the ASP.NET framework to build robust backend services that support frontend functionalities and manage data effectively.
- **Code Maintenance** : Write clean, maintainable, and efficient code, adhering to industry best practices and project requirements.
- **Collaborative Development** : Work closely with a team of developers to implement features, troubleshoot issues, and optimize application performance.
- **Designed and Developed UI design** for over 15 clients using CSS, HTML, ASP.NET, Vue, and React; websites.

Front-End Developer

2020 - 2022

Osiris Organization

Lagos, Nigeria

Osiris Organization is a forward-thinking agricultural and technology farm that combines traditional farming practices with innovative tech solutions to enhance productivity and sustainability. We focus on leveraging cutting-edge technology to optimize crop management and resource utilization, ensuring a sustainable approach to modern agriculture.

- **Responsive Design**: The frontend was built with **HTML**, **CSS**, and **Tailwind CSS** to ensure the app's layout is fully responsive and accessible on various devices, from mobile to desktop.
- **React for UI Development**: We used **React.js** to develop the app's dynamic and interactive user interface, allowing smooth navigation between pages and a seamless user experience.
- **Component-Based Architecture**: The app was developed using reusable **React components** for scalability, which streamlined the development process and improved maintainability.
- **API Integration**: The frontend was integrated with backend services using **RESTful APIs**, allowing real-time data updates and interaction between the tech farm's monitoring system and the app.
